

Adding a Device to Bluetooth Gateway

- 1 On your home screen in Smart Life, select the Gateway to which you want to add the device(s). Touch the icon representing the Gateway, then at the bottom of the next screen, select [Add device]

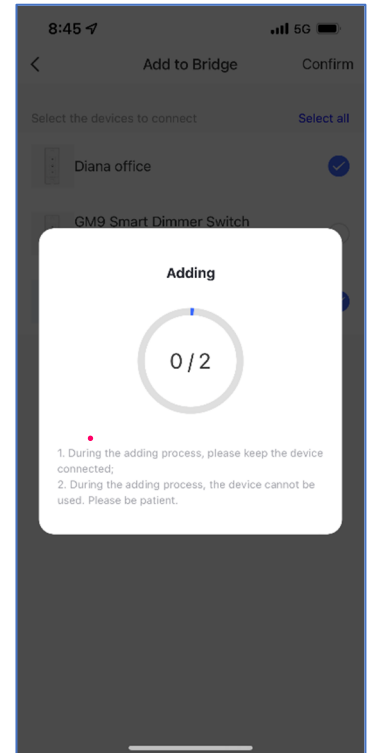

- 2 You may see one or both of the screens to the right; if the left screen appears first, follow the onscreen instructions to get to the screen (on right) showing the device(s) you wish to add to the Gateway then press [Confirm].

3

On the next screen, press [Connect Now] and then the app will process the command to connect the devices to the Gateway.

4

Once connected, you will see a screen indicating they have been successfully added, then press [Finish]. You will then be brought back to the Gateway Screen, and the new devices will appear on the list.
